

Draft, restructuring while shipping. Islington is further along than most: an established partnership, mid-way through a governance rebuild, with its shared hub with Camden now recruiting an operator.

Working note, September 2026

A working group note on Islington, 2026

Four action groups, and a hub about to get an operator.

Islington isn't building something from a blank page — the Islington Food Partnership already exists, already has funding, and is mid-way through restructuring itself for delivery. Its shared food hub with Camden, at Regis Road, is now recruiting the operator who will run it. This page holds the honest state of both, checked against what the rest of this working group has already learned.

Action groups replacing one coordinating group

~£3m

Funding case that won the joint hub bid (~£200k cost)

Early Oct

Expressions-of-interest deadline for the hub operator

3yr

IFP's confirmed funding term, to August 2028

Stated plainly, not smoothed over

Where Islington is right now

Two things are happening at once: a governance rebuild of the partnership itself, and the operator search for the physical hub it's been working toward. Neither is finished.

The Islington Food Partnership (IFP) is an established, independently funded partnership — council-funded, but not run inside the council, unlike Camden's equivalent, which sits within council structures. It's restructuring from one general coordinating group into four dedicated action groups: Healthy & Affordable Food for All, Climate & Nature Emergency, Sustainable Local Food Economy, and a new, cross-cutting Fundraising group. Each will run with roughly 10-12 members, at least one IFP staff member embedded, board sign-off on who joins, and at least one representative from every action group also sitting on the strategic board — so there's less disconnect between what a group is doing and what the board hears.

The shared food distribution hub with Camden, at Regis Road, has moved into its next concrete phase: recruiting an operator. Expressions of interest are open, with site visits arranged for anyone interested, and a deadline in early October. The initial term is two years, and part of the operator's brief is to work out the site's longer-term future, not just run day-to-day logistics. One genuine structural quirk worth naming: because Camden's food partnership sits inside its council and Islington's IFP is a separate, independently funded body, the incoming operator will have to manage two different kinds of relationship, not one symmetrical arrangement either side of the borough line.

Alongside the hub, Islington is trialling a partnership with a national hygiene-bank charity — deliberately hyper-local, in one small area first, since the shared hub isn't operational yet and the system is being tested at a manageable scale before any wider rollout. A separate idea — connecting with a national charity that distributes donated non-food essentials — has been raised but not yet followed up.

If the Regis Road site doesn't work out long-term, Islington has also asked whether a disused council building could host a hub instead. Nothing has come forward yet, though a borough-wide review of surplus school and community buildings — a consequence of falling pupil numbers — is under way, and any resulting space would be treated as a high priority for a hub.

The state of play, in short

Vision	Four action groups delivering a shared 3-year plan, backed by a joint hub with Camden
Structure	An independent, council-funded partnership — not run inside the council
Hub status	Operator recruitment open now, deadline early October, initial 2-year term
The funding case that won it	~£1m food value + ~£2m social value, against a ~£200k cost
SROI tool	Piloting with a small number of providers first, before wider rollout
Hygiene-bank trial	Starting hyper-local, in one small area, ahead of the hub going live
Fallback site option	A borough-wide review of surplus school/community buildings, none confirmed
IFP funding	Confirmed for 3 years, to August 2028, aligned to the food strategy
Next fixed point	Board sign-off on action-group membership; a London-wide dinner planned for November

Islington is close enough to live that it's now a source of lessons, not just a recipient

What the shared Camden and Islington hub already confirms, and the one new question it raises

Three of these check out against what the rest of the group has already found. The fourth is something Islington is running into that nobody else has documented yet.

Will a refined SROI tool actually get used?

Islington's own social-value tool is being kept deliberately small, on purpose

Islington's Social Return on Investment tool, developed with a university partner, is being piloted with just one or two food-aid providers first — not because of caution for its own sake, but because the current version is genuinely clunky (one single line for "advice", when there are really dozens of distinct types). A direct request from the room: keep it simple enough that time-poor frontline staff will actually use it. This checks out against Birmingham's independent finding elsewhere in this group: a proper SROI study is effectively out of reach without funding a university partner directly.

The lesson to carry over: refine before rolling out, and design for the staff who have the least spare time to fill in a form — not the funders who'll eventually read the results.

[See the Birmingham finding](#)

Can a hub serve organic ambitions when surplus is free?

Islington is living the "both markets" question, not just discussing it

Sustain's National Lottery bid concept is framed around agroecological and organic food — but Felix Project can supply surplus for free, and food-aid budgets are tight enough that paying for "better" food is a genuinely hard sell right now. This is the live, lived version of an open design question already sitting on this page: whether one hub can serve both nutrient-dense organic supply and surplus redistribution from the same infrastructure, without one undercutting the other.

The lesson to carry over: Islington's experience here is worth feeding back to the wider group directly — it's a real test of a question the rest of the group has so far only raised in theory.

What if the shared site falls through?

Tower Hamlets shows a fallback that doesn't need a perfect site

Tower Hamlets' hub isn't really fit for purpose, but a developer with Section 106 obligations agreed to install shipping containers on land awaiting redevelopment —

giving a working food hub for a three-year term on a site that would otherwise sit empty. It's a workable, replicable model, not a compromise to be embarrassed about.

The lesson to carry over: if Islington's own review of surplus school and community buildings doesn't produce a result in time, a Section 106-funded meanwhile structure is a proven fallback, not a last resort.

[See the hub anatomy](#)

How do you run one hub across two different borough structures?

A new finding, not a borrowed one — worth watching closely

Because Camden's food partnership sits inside its council and Islington's IFP is an independently funded body outside the council, the hub operator being recruited now will have to build and manage two structurally different relationships from day one — not a single, symmetrical partnership. Nobody else in this working group has documented this pattern yet, but every future multi-borough hub will likely hit some version of it.

The lesson to carry over: this is Islington's contribution back to the group, not a lesson borrowed from it — worth writing up properly once the operator is appointed and the arrangement is tested for real.

Concrete, not another open conversation

What's next for Islington

Twelve actions, in the order they were actually raised.

Islington IFP staff, council officers, action-group members

- 01 Confirm board sign-off on action-group membership and recruit the remaining places, particularly for the newer local-economy and fundraising groups.
-

In progress

02	Close the hub operator expressions-of-interest window (early October) and run the arranged site visits.	In progress
03	Decide, from the expressions of interest received, which applicant(s) move to a fuller proposal stage.	Open
04	Continue the hygiene-bank trial in its one small pilot area, and open a conversation with a national in-kind-donations charity about non-food essentials.	Open
05	Launch the per-action-group WhatsApp groups and shared SharePoint drive, and move board updates to a short written highlight report instead of long verbal ones.	In progress
06	Keep piloting the SROI tool with a small number of providers, refine it for simplicity, then plan the wider rollout.	In progress
07	Wait on Sustain's confirmation of whether Islington is a regional partner in the National Lottery bid, and what that would involve.	Awaiting decision
08	Complete the Sustainable Food Places Silver Award application, pending outstanding feedback.	In progress
09	Add dietary-requirement fields (vegan, vegetarian, halal) to the internal food-provider map, and decide whether to publish a joint Camden + Islington public-facing map, given how much use already crosses the border.	Open
The working group Dark Matter Labs, Felix Project, the wider network		
10	Bring Islington into the November Future Food Dinner and workshop, extending the format already run with Camden to more boroughs.	Planned
11	Fold Islington's hub-operator process and governance restructure into the Hub Documentation library, as a live example for other boroughs going through the same thing.	Ongoing

12 Feed Islington's "surplus is free, agroecological costs money" experience back into the working group's own open question about hubs serving both markets at once.

Open

The point of this list: Islington isn't waiting on a theory — it's mid-way through building the thing. What's left is closing the operator search cleanly, keeping the governance rebuild from losing momentum, and writing up what it's already learning for the boroughs still behind it.

Islington Food Hub

A working note on the Islington Food Partnership's governance rebuild and its shared hub with Camden, part of the London Hubs & Markets Working Group and Dark Matter Labs' Food as Infrastructure portfolio.
